

Scaffolding Safety Precautions

Inspect Scaffolding

Professionally trained person should inspect the base work of scaffolding.

Never assume that foundation is safe at all times because when the heavy work is carried out, Scaffolds can deteriorate.

Overhead Power Lines

Safety Supervisors need to confirm that Scaffold's are not moved within the overhead power lines.

If you are not comfortable with the Scaffold structure, you should complaint to supervisor and share the apprehensions.

Overloading

Try to learn Scaffold's Load Bearing Capacity. The Scaffold structure can only handle particular maximum amount.

Accidents happen because of overloading which you might not have considered as a hazard.

Full Safeguard

When you work on scaffolding, wear complete body harness and fall arrest system.

Never work on the scaffold without wearing the right safety protections.

Head and Foot Protection

Wear the right Safety hats and safety shoes at all times. Because workers from top floors can bang something and that has the chance to fall on your head.

Never climb up a scaffold hurriedly to take something that you forget because something can fall from above or you can slip due to wet surface.
